## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election without traverse of Group I, claims 1-46, in Paper No. 5 is acknowledged.

This application contains claims directed to the following patentably distinct species of the claimed invention:

- Species I: Using pins and holes to align the semiconductor device, as shown in Figure 6A.
- Species II: Using an optical instrument to align the semiconductor device, as shown in Figure 6B.

If Species I is selected, Applicant is required to further elect from the following species:

- Species III: Using locking head pins to align the semiconductor device, as shown in Figure 4A.
- Species IV: Using circumferential groove pins to align the semiconductor device, as shown in Figure 4B.
- Species V: Forming notch-shaped channels at the periphery of the semiconductor device to align such a semiconductor device, as shown in Figure 5A.
- Species VI: Forming notch-shaped channels asymmetrically with respect to the geographical outline of the semiconductor device to align such a semiconductor device, as shown in Figure 5B.

- Species VII: Forming a first size notch-shaped channel and a second size notch-shaped channel to align such a semiconductor device, as shown in Figure 5C.
- Species VII: Forming a first notch-shaped channel in a diagonal direction with respect to a second size notch-shaped channel to align such a semiconductor device, as shown in Figure 3.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 1 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the

Art Unit: 2815

case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
